Comment on RM-10521

Proposal to allow use of European PMS-446 unlicensed radios in the US by foreign nationals.

I am opposed to this petition.

As a ham i feel our frequencies are a resource and should not be reallocated or shared with non licensed radios. While these radios operate at low power I feel that they still intrude on an established frequency and set a bad precedant. As a general rule most UK people probably wouldn't bring their radios here but if they want to operate in the FRS/Unlicensed band they can pick up a US model for less then \$20, maybe even far less.

As for the idea of unenforceable I feel its only unenforceable if the FCC does not do its job which as a general rule it seems to at least try and do.

Also ham's from time to time are used for disaster/emergency communications and if there were these radios operation in the vicinty of a diaster scene it could POTENTIALLY disrupt these communications.

I again am OPPOSED to this petition.

Respectfully submitted,

Duane Whittingham - N9SSN
